## Monitor Panel

TouchSensor Technologies, LLC

Phone: 630.221.9000

<http://www.touchsensor.com>

The monitor display panel shows the fluid levels of the Black Water, Gray Water, and Fresh Water tanks, and the LP gas tank. Push the Tank Test rocker switch to tank fluid show levels in 1/3 increments.

The panel also shows the voltage status of the main (engine) and the auxiliary (house) battery by using a labeled rocker switch.

The fluid tank monitor system has been calibrated at the TouchSensor factory for the size tanks the Interstate uses and, therefore, should never need another calibration. On the rear of the monitor panel there is an adjustable potentiometer to manually adjust the monitor panel reading of the LPG tank level. This is set at the Airstream factory for the tank on the Interstate motorhome and needs no further adjustment.

## Entertainment System

The Interstate comes standard with a Samsung Blu-Ray player and a Samsung 22" 1080P, HD LED TV.

TV P/N 690651

Blu-Ray player P/N 512693

The Interstate is equipped with the Kenwood Excelon DNN990HD, bringing automotive stereo and navigation up to speed with modern technologies.

Antenna Manufacturer:

Winegard Company

3000 Kirkwood Street

Burlington, Iowa 52601-2000

Phone: 800-843-4741

Winegard's Model RS 3460 RoadStar™ omnidirectional antenna provides excellent reception of VHF/UHF TV channels. The RoadStar compact modern styling is unobtrusive and blends well with the designs of recreational vehicles.

The UV stabilized copolymer housing makes the antenna virtually impervious to weathering and color change. The unique omnidirectional characteristics of model RS-3460 provide excellent reception in areas where stations are in different directions without the need for a complex rotor system. A built-in amplifier provides up to six times the received signal on VHF and nine times the UHF signal ensuring the best possible reception in color and black and white.

## Cleaning Antenna Housing

The surface of the antenna is a tough laminated ultraviolet shield. Clean only with mild soap and water. Use no solvents, alcohol, or cleaning fluids.

## In-Motion TV Antenna Pre-Wire

The motorhome is pre-wired with a coax cable for an in-motion TV antenna. One end of the cable is coiled above the rear center roof locker above the removable interior top panel and the other end is coiled behind the removable entertainment cabinet side panel where the TV booster is mounted. A receiver can be placed inside the cabinet. An HDMI cable is located in the center rooflocker and runs to the rear or wardrobe TV.
